

RAG Testing Knowledge Base

AWS

Amazon Web Services (AWS) is a cloud computing platform. Key services include EC2, S3, Lambda, RDS, VPC, IAM and CloudFormation. AWS launched in 2006.

Azure

Microsoft Azure is a cloud platform offering Virtual Machines, Storage Accounts, Azure SQL Database, Azure Functions and Virtual Networks.

Python

Python is a high-level programming language. Popular features include simplicity, object-oriented programming, decorators, generators and extensive libraries.

Artificial Intelligence

AI enables machines to perform tasks such as learning, reasoning and prediction. Common areas include Machine Learning, Deep Learning and Natural Language Processing.

Cybersecurity

Cybersecurity focuses on protecting systems, networks and data. Common concepts include encryption, authentication, authorization, firewalls and vulnerability management.

Databases

Relational databases include MySQL, PostgreSQL and SQL Server. NoSQL databases include MongoDB, Cassandra and DynamoDB.

Docker

Docker is a containerization platform. Images are templates, containers are running instances, and Docker Hub is a repository for images.

Kubernetes

Kubernetes is an orchestration platform used to manage containers. Key objects include Pods, Deployments, Services and ConfigMaps.

DevOps

DevOps combines development and operations practices. Common tools include Git, Jenkins, GitHub Actions, Docker and Kubernetes.

Networking

Networking concepts include IP addresses, DNS, HTTP, HTTPS, TCP, UDP, routers and switches.
